Safe & Effective Treatment of Pain in an Opioid Overdose Epidemic

Ascension

Randy Irwin MD Amy LaHood MD MPH Lindsay Saum, PharmD, BCPS, BCGP

February 16, 2019

Disclosures

- All speakers have no financial conflicts to disclose
- The content of this talk does NOT apply to patients who are receiving end of life or palliative care, on hospice

Objectives

- Learn about the Origin, Scope and Consequences of the Opioid Crisis
- Review the evidence for using Opioids in the tx of Acute & Chronic Pain
- Increase provider confidence understanding Indiana Opioid Laws
- Understand best practices that can mitigate opioid harm to our patients and communities
- Discuss Strategies & Challenges when Treating the Opioid Dependent Population
- Review Ascension efforts to support providers and patients as it relates to the Opioid Epidemic

United States Pain Paradigm

- USA ~4.5% of world population
- Consume 99% global hydrocodone
- Consume **73%** global oxycodone
- Consume 2/3 global illicit drugs

Narcotic Drugs — Estimated World Requirements for 2018 — Statistics for 2016 https://www.incb.org/documents/Narcotic-Drugs/Technical-Publications/2017/Narcotic_drugs_technical_publication_2017.pdf

Therapeutic Opioids Use in the U.S. (mg/person) from 1997 – 2007

Туре	1997	1998	1999	2000	2001	2002	2003	2004	2005	2006	2007	% of Change from 1997	
Methadone	1.94	2.60	3.47	5.14*	6.81	9.54	13.26	17.03	19.31	23.84	25.50		1214%
Oxycodone	16.68	24.66	34.99	55.11	71.75	80.56	95.97	105.05	110.27	133.33	154.73		899%
Fentanyl	0.28	0.34	0.39	0.53*	0.67	0.87	1.14	1.33	1.40	1.54	1.67		496%
Hydrocodone	32.49	38.93	43.57	50.83	56.15	67.77	80.44	86.70	92.90	107.49	118.70		265%
Morphine	22.20	24.01	24.50	28.11	31.72	36.95	44.30	51.55	54.20	63.03	68.59		209%
Total	73.59	90.54	106.92	139.72	167.1	195.69	235.11	261.66	278	329.23	369.19		402%

Table 6. The increase in therapeutic opioids use in the U.S. (mg/person) from 1997 to 2007.

* For year 2000 data is not available, the average of 1999 and 2001 was taken.

Epidemic of Chronic Pain

- Lasting >3 months
- Persists beyond what's expected, given degree of pathology
- Elicited by injury/disease
- Likely perpetuated factors pathogenically & physically remote from original cause
- Prevalence of chronic pain in US
 - 10-25%
 - Rate increases with age/ chronic illness/obesity
 - Opioids recommended therapies for management of several types of non-cancer related pain

Why the Opioid Increase?

- Liberalization of laws governing opioid prescribing
- Joint Commission Standards 2000
- Growing public awareness of the right to pain relief
- HCAPS- Patient Satisfaction Surveys
- Aggressive marketing

"The Promotion and Marketing of OxyContin: Commercial Triumph, Public Health Tragedy"

No studies support benefit over other opioids

- Unprecedented Marketing
- Sales Reps trained "Risk of Addiction <1%"
- Original FDA Label- Risk of Abuse/Addiction 1996 "Very Rare"
- Could be crushed, injected, inhaled or swallowed
- Risk of Abuse consistently minimized
- 2007 Purdue Pharma fined \$634M / 3 exec. Felony charges
- 2009 OxyContin Sales \$3B
- Oxycontin 2018 FDA package insert

"A double-blind, placebo-controlled, fixed-dose, parallel group, two-week study was conducted in 133 patients with persistent, moderate to severe pain, who were judged as having inadequate pain control with their current therapy. In this study, OXYCONTIN 20 mg, but not 10mg, was statistically significant in pain reduction compared with placebo."

Rates of Opioid Overdose Deaths, Sales, and Treatment Admissions United States, 1999–2010

CDC. *MMWR* 2011. <u>http://www.cdc.gov/mmwr/preview/mmwrhtml/mm60e1101a1.htm?s_cid=mm60e1101a1_w</u>. Updated with 2009 mortality and 2010 treatment admission data.

Motor Vehicle Accident vs. Overdose Deaths

As many as **1 in 4** PEOPLE pr st

receiving prescription opioids long term in a primary care setting struggles with addiction.

OXYCODC

die every day from an opioid overdose

(including Rx and illicit opioids).

Total US Drug Deaths

Annual Societal Cost of Heroin Addiction

- \$50,799 per patient heroin use disorder/ year
- \$11,148 per patient with diabetes / year
- \$2,567 per patient with COPD / year

Costs of the Opioid Epidemic by Year and Type

* Data between labeled estimates interpolated using constant growth rates

Number of Americans on Long-term Opioids

First, Do No Harm

Morphine Equivalent Dose (MED) Mg Morphine Dose (MME)

1mg hydrocodone = 1mg morphine
15mg hydrocodone = 15mg morphine
90mg hydrocodone = 90mg morphine

1mg oxycodone = 1.5mg morphine
10mg oxycodone = 15mg morphine
60mg oxycodone = 90mg morphine

cension

Are Opioids Effective for Pain?

Studies <16 weeks – Opioids vs placebo for pain

- Moderate reduction in pain
- Small improvement in function
- Limited by high-drop out rates, excluded patient with h/o SUD

Evidence & Expert Opinion for Chronic Opioids

2014 AAN- Opioids for chronic non-cancer Pain

"Whereas there is evidence for significant short-term pain relief, there is no substantial evidence for maintenance of pain relief or improved function over long periods of time without incurring serious risk of overdose, dependence, or addiction."

2016 CDC Opioid Guideline

"Evidence on long-term opioid therapy for chronic pain outside of end-of-life care remains limited with insufficient evidence to determine long-term benefits, though evidence suggests risk of serious harms that appears to be dose –dependent."

Franklin GM. "Opioids for chronic noncancer pain: A position paper of the American Academy of Neurology". Neurology. 2014 Sep 30;83(14):1277-84 Dowell D, Haegerich TM, Chou R. CDC Guideline for Prescribing Opioids for Chronic Pain — United States, 2016. MMWR Recomm Rep 2016;65(No. RR-1):1–49. DOI: http://dx.doi.org/10.15585/mmwr.rr6501e

CENTERS FOR DISE. CONTROL AND PREVENT

Ascension

CDC Guideline for Prescribing Opioids 2016

- Opioids should only be continued if there is a meaningful improvement in pain & function (30% improvement)
- Exercise & CBT improve pain & function in OA, Fibromyalgia
- Avoid prescribing Opioid & Benzo whenever possible
- UDM initiation & annually
- Use lowest dose, additional precaution at 50MED/day
- Avoid dosage >90MED/day (if not improved DC or taper)

AMG Opioid Ceiling Dose = 90MED

2016 FDA Black Box Warning

Health care professionals should limit prescribing opioid pain medicines with benzodiazepines or other CNS depressants only to patients for whom alternative treatment options are inadequate. If these medicines are prescribed together, limit the dosages and duration of each drug to the minimum possible while achieving the desired clinical effect. Warn patients and caregivers about the risks of slowed or difficult breathing and/or sedation, and the associated signs and symptoms. Avoid prescribing prescription opioid cough medicines for patients taking benzodiazepines or other CNS depressants, including alcohol.

Opioid Changes in Canada

- 508 Opioids Relabeled by January 2019
- Non-Cancer Chronic Pain- Ceiling dose =90MME
- Any Non-Cancer Chronic Pain >90MME off-label
- Acute pain limits 3 days

Long Acting/ ER Opioid Evidence

- FDA label LA/ER "the management of pain severe enough to require daily, around-the-clock, long-term opioid treatment and for which alternative treatment options are inadequate."
- LA/ER should not be used in Opioid Naïve patients (Opioid Tolerant = 60 MED for one week)
- There are NO studies showing any benefits of long-acting opioids over short acting opioids
- Long acting opioids increase all-cause mortality when treating non-cancer chronic pain

Acute Pain – every day of an opioid matters

FIGURE 2. One- and 3-year probabilities of continued opioid use, by duration of first episode in days (base case)

Duration is expressed in terms of days (1-40) with increments of 1 day. Discontinuation is defined as 180 opioid-free days and allowable gap to assess continuous opioid use in first episode was 30 days.

High Opioid Dose and Overdose Risk

Majority of opioid overdose deaths associated with multiple sources and/or high dosages

Non-Medical Use of Prescription Opioids

2014 Indiana Chronic Opioid Law Mental Health Risk Stratification

- Mental & Physical health are inextricably linked
- Treatment of underlying mental health issues will often improve response to pain treatment
- PHQ-2,PHQ-9, GAD-7 can be useful, quick, validated tools

PATIENT HEALTH QUESTIONNAIRE-9 (PHQ-9)

Over the last 2 weeks, how often have you been bothered by any of the following problems? (Use * ro indicate your answer)	Not at all	Several days	More than half the days	Nearly every day
1. Little interest or pleasure in doing things	1	1	2	3
2. Feeling down, depressed, or hop		1	2	3
3. Trouble falling or staying asleep, or size	Y	1	2	3
4. Feeling tired or having little energy		1	2	3
5. Poor appetite or overeating	0	1	2	3
 Feeling bad about yourself — or that you are a failure or have let yourself or your family down 	0	1	2	3
 Trouble concentrating on things, such as reading the newspaper or watching television 	0	1	2	3
 Moving or speaking so slowly that other people could have noticed? Or the opposite — being so fidgety or restless that you have been moving around a lot more than usual 	0	1	2	3
 Thoughts that you would be better off dead or of hurting yourself in some way 	0	1	2	3

2014 Indiana Chronic Opioid Law Risk Stratification for Substance Misuse

- Patients with h/o substance use disorder increased risk of harm from opioids
- Ask patients about past or current substance use/abuse (alcohol, prescription medications, illicit drugs or tobacco/enicotine) prior to initiating opioids
- Validated tools....
 ORT, Dire, COMM, SOAPP-R, DAST

2014 Indiana Chronic Opioid Law Risk Stratification

- UDM has evolved to become a <u>standard of care</u> when prescribing opioids
- Detect illicit substances
- Monitor adherence to prescribed meds
- Interpretation is critical
- "At any time the physician determines that it is medically necessary, whether at the outset of an opioid treatment or anytime thereafter, a physician prescribing opioids for a patient shall perform or order a drug monitoring test, which must include a confirmatory test."

2014 Indiana Chronic Opioid Law Risk Stratification

- Review state PDMP before initiating opioid therapy.
- Determine whether patient receiving opioid dosages or dangerous combinations that put him 221 risk for overdose • Check ini+: Overridden by

2014 Indiana Chronic Opioid Law Review & Sign a Treatment Agreement

- Goals of treatment
- Consent drug monitoring / random pill counts
- Prescribing policies, prohibition of sharing medications & requirement to take meds as prescribed
- Information on pain meds prescribed by other physicians / alcohol use
- Reasons that opioid therapy may be changed or discontinued
- Counsel women of child-bearing age about the potential for fetal opioid dependence & neonatal abstinence syndrome (NAS).

2014 Indiana Chronic Opioid Law- Periodic Scheduled Visits

- Evaluate patient progress
- Set Function Goals

cension

(pain score of 0 not realistic)

- Monitor compliance /set expectations
- Q 4mo, if stable (minimum)
- Q 2mo, if changing meds
- Face to Face if >60 MED, risks

Affect • Activities of Daily Living • Analgesia

Adverse effects • Aberrant

2017 – 7d Opioid Prescribing Limit

- Physician issuing initial opioid prescription for a patient may not prescribe more than a 7-day supply
 - Note: Limit applies to that physician's first opioid prescription to that patient
 - No specific exception for practitioners in the same practice
- For patients < 18yo, all opioid Rx limited to 7-day supply
- Exceptions to 7-Day Limit
 - Cancer
 - MAT for a substance-abuse disorder
 - Palliative Care
 - **Professional Judgment** (Must document in the MR that a non-opiate not appropriate and physician is using his or her professional judgment to prescribe for longer than the 7-day limit)
- Allows Indiana pharmacies to partially fill a prescription

2018 Indiana 2h Opioid CME requirement

Senate Bill 225 (Effective July 1, 2018)

Beginning July 1, 2019 (next physician renewal):

- All practitioners who apply for or renew Indiana Controlled Substances Registration
- Must have completed 2 hours of CME during the previous 2 years
 CME must address opioid prescribing and opioid abuse
- For physicians CME courses must be approved by the IN Medical Licensing Board or offered by an approved organization

The law sunsets July 1, 2025

2018 Indiana INSPECT requirement

Senate Bill 221 (Effective July 1, 2018)

Requires checking INSPECT each time before prescribing an opioid or benzodiazepine to any patient (No specific exceptions for hospice, palliative care, or LTC patients)

Effective date <u>depends on situation</u>:

- Applies **7/1/2018** for practitioners with INSPECT integrated into EMR
- Applies **1/1/2019** for practitioners providing services in
 - The ER; or pain management clinic
- Applies **1/1/2020** to practitioners providing services in a hospital
- Applies 1/1/2021 to all practitioners
- Patients on pain management contract –q 90dPractitioners

Universal Precautions - Be wary of co-morbid risks with opioids

Patient morbidity/mortality risk is more pronounced for patients...

- Age <25</p>
- Benzodiazepine use/abuse
- Alcohol use/abuse
- Illicit substance use/abuse
- Untreated mental health issues
 (e.g. depression, hx of suicide)
- Chronic respiratory problems

 (e.g. Asthma, COPD, OSA, CHF)

Patient Education- Opioid Risks

Short- Term

- Nausea/Vomiting
- Constipation
- Sedation
- Dizziness
- Opioid tolerance/dependence/ addiction
- Respiratory Depression
- Death

Long-Term

- Hyperalgesia
- Mood Disorders
- Immunosuppression
- Amenorrhea/ Galactorrhea
- Androgen deficiency/Decreased libido
- Osteoporosis
- Opioid tolerance/dependence/addiction
- Respiratory Depression
- Death

DANGER

Safe Storage & Safe Disposal

Follow these simple steps to dispose of medicines in the household trash

MIX

Mix medicines (do not crush tablets or capsules) with an unpalatable substance such as dirt, kitty litter, or used coffee grounds;

PLACE

Place the mixture in a container such as a sealed plastic bag;

THROW

Throw the container in your household trash;

SCRATCH OUT

Scratch out **all personal information** on the prescription label of your empty pill bottle or empty medicine packaging to make it unreadable, then dispose of the container.

https://www.fda.gov/Drugs/ResourcesForYou/Consumers/Buyin gUsingMedicineSafely/EnsuringSafeUseofMedicine/SafeDisposal ofMedicines/ucm186187.htm

Utilize Non-Opioid Medications

MSK/Inflammatory pain

- Acetaminophen
- NSAIDS
- Topical anesthetics (lidocaine)
- Anti-inflammatory cream
- Steroid injections
- Muscle relaxants

Restore Sleep

• Melatonin, TCA's, trazadone

Neuropathic Pain

- TCA's (SOR-A)
- Topical anesthetics
- Neuropathic creams
- SNRI's (SOR-A)
- Anticonvulsants

Visceral pain

- NSAIDS/acetaminophen
- Antispasmodics

Non-Pharmacologic Interventions

- ✓ Tobacco Cessation
- ✓ Interventional pain modalities
- ✓ Optimize sleep
- ✓ Good nutrition (influences weight/inflammation/mood)
- ✓ Exercise, stretching, yoga
- ✓ Ice/Heat
- ✓ Counseling (CBT)
- ✓ PT/TENS therapy/hypnosis
- ✓ Manipulation/OT
- ✓ Massage/acupuncture
- ✓ Self-care- mattress, shoes

Opioid Weaning

Opioid Use Disorder (DSM-5)

A problematic pattern of opioid use leading to clinically significant impairment or distress

- Opioids are often taken in larger amounts or over a longer period than intended
- Persistent desire or unsuccessful efforts to cut down or control opioid use
- A great deal of time is spent in activities necessary to obtain the opioid, use the opioid, or recover from its effects
- Craving, or a strong desire to use opioids.
- Recurrent opioid use resulting in a failure to fulfill major role obligations at work, school, or home
- Continued opioid use despite having persistent or recurrent social or interpersonal problems caused or exacerbated by the
 effects of opioids
- Important social, occupational, or recreational activities are given up or reduced because of opioid use
- Recurrent opioid use in situations in which it is physically hazardous.
- Continued opioid use despite knowledge of having a persistent or recurrent physical or psychological problem that is likely to have been caused or exacerbated by the substance
- Withdrawal, as manifested by either of the following: a. The characteristic opioid withdrawal syndrome (refer to Criteria A and B of the criteria set for opioid withdrawal).
 b. Opioids (or a closely related substance) are taken to relieve or avoid withdrawal symptoms
- Tolerance, as defined by either of the following:
 - Need for increased amounts of opioids to achieve intoxication or desired effect.
 - A markedly diminished effect with continued use of the same amount of an opioid. Note: This criterion is not considered to be met for those taking opioids solely under appropriate medical supervision.

Medication Assisted Tx (MAT) - SAVES LIVES

<u>Methadone</u>

- Opioid Agonist
- Licensed Federal Gov't
- Directly Observed Tx
- Patient Barriers
 - Daily transportation
 - \$ / Stigma / Drug culture

Buprenorphine

- Partial Opioid Agonist
- Prescribed w/ DEA X
- DEA Schedule 4 / Retail Rx
- Patient Barriers
 - Few Providers/ \$\$/Mental Health services

<u>Naltrexone</u>

- Opioid Antagonist
- No abuse potential
- Monthly injection
- \$\$\$\$

Medication Assisted Therapy (MAT)

- Decreases Criminality
- Decreases HIV, Hep C
- Decreases OD Death
- Increases retention in therapy

 For every \$1 spent on Methadone program – estimated \$12 savings (healthcare/criminal justice)

Naloxone - opioid antagonist OTC Overdose reversal medication

Naloxone – mechanism of action

Displaces heroin (any opiate) off the receptor

68

Difficult Cases

minal & body Sould at

- Patients often have undertreated or undiagnosed mental illness or substance use disorder
- Multidisciplinary Team (Social worker, psych, pharmacist, physicians)
- ALWAYS refer for Substance Use Eval & Tx if indicated
- Non-judgmental /Empathetic care (our words are incredibly powerful)
 - Pain worsened by decreased control and when not validated
 - "It's really important to me that we control your pain"
 - "I can see that your miserable and we will do everything we can to safely keep you comfortable"
 - "I can see that you are suffering and I want to help you with your pain, but ethically and legally, this just isn't something I can safely prescribe for you today."

Maintain Status Quo

How can we help bend the curve on the opioid epidemic?

So, What Can I Do?

Strategies to Minimize Opioids

Ascension

Lindsay Saum, PharmD, BCPS, BCGP Clinical Pharmacy Specialist- Internal Medicine, St. Vincent Associate Professor of Pharmacy Practice, Butler University

- 1. If I shouldn't prescribe opioids, what can I use?
- 2. If I have to use opioids, then what can I do to minimize the risk?
- 3. What is St. Vincent and Ascension doing to help reduce opioid prescribing?

Multimodal Pain Management

Using two or more different methods or medications to manage pain

Co-prescribing of multiple drugs with different pharmacology

Using multiple agents to provide synergistic pain management Combination of pharmacologic and non-pharmacologic treatments to obtain synergistic effects

Using a variety of combinations with different mechanisms of action

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Non-opioid Options

Acetaminophen

- Mechanism for analgesia: exact is unknown
 - Activity in postsynaptic endocannabinoid system
 - Inhibitory action at COX
 - Serotonergic effects
- Typical dosing: 500 to 650 mg PO Q6H
- Clinical pearls:

Hepatic
MetabolismLeading cause of
drug induced
liver failure in USMax daily dose
of 2-4 gADRs: GI upset,
insomnia,
headache

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Acetaminophen

Benefit	Little or No Benefit
1. Preoperative (one dose):	1. Chronic Low Back Pain: no
-30% reduction in opioids at 4 hours	difference compared to NSAIDs
-Increased satisfaction scores	2. Fibromyalgia
2. Arthritis	3. Post-Herpetic Neuralgia
	4. Diabetic Neuropathy

- Most studies with IV acetaminophen, however when compared, no difference in IV and PO
- Should be given on scheduled basis

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

- Mechanism for analgesia: inhibition of COX isoenzymes which leads to a decrease in prostaglandin synthesis
 - COX-1 and COX-2: non-selective
 - COX-2: selective
- Clinical Pearls

- Typical dosing:
 - Naproxen 500 mg PO BID
 - Ibuprofen 800 mg PO Q8H
 - Ketorolac 30 mg IV Q6H
 - Celecoxib 200 mg PO BID

Nephrotoxicity

GI Toxicity: 个Non-selective than selective

Cardiac Toxicity: Selective than non-selective

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

NSAIDs

Benefit	Little to No Bene
 Pre and Post-operative: Decrease of opioid consumption by 20-35% (non-selective) NNT to achieve 50% reduction in pain: 1.5 to 4.5 No difference in bleeding rates (ketorolac vs. opioids alone) unless > 75 years old Chronic Low Back Pain Musculoskeletal Pain Arthritis 	 Fibromyalgia Post-Herpetic Diabetic Neuro

efit

- Neuralgia
- opathy

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Gabapentinoids

- Mechanism for analgesia: inhibition of calcium channels which leads to a decrease neurotransmitter release
 - Glutamate, norepinephrine, serotonin, dopamine and substance P
- Typical dosing:
 - Gabapentin: 900 to 1800 mg total daily dose
 - Pregabalin: 300 mg total daily dose
- Clinical pearls:

ADRs: CNS	Abuse	Taper when
depression	potential:	initiating and
dysfunction	euphoria	discontinuing

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Gabapentinoids

Benefit	Little to No Benefit
 Preoperative (one dose): Decrease pain scores and opioid consumption up to 1 week post-operative Minimal long term benefit following 1 dose (6 weeks) Reduced opioid adverse effects (nausea, vomiting, urinary retention) Post-Herpetic Neuralgia Diabetic Neuropathy Fibromyalgia 	 Lower Back Pain (mixed results) Musculoskeletal Pain Arthritis

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Antidepressants (TCAs and SNRIs)

- Mechanism for analgesia: inhibition of voltage gated sodium channels
 - Decrease in the release of serotonin and norepinephrine
- Typical dosing:
 - Duloxetine 60 mg PO daily
 - Amitriptyline 50 to 100 mg PO daily
 - Nortriptyline 150 mg total daily dose
- Clinical pearls:

TCA ADRs.	SNRI ADRs:	
Anticholinergic	Hypertension (high dose)	Must be tapered on and off
QTc Prolongation	LFT abnormalities	

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Antidepressants

Benefit	Little to No Benefit
1. Preoperative (two doses of Duloxetine):	1. Musculoskeletal Pain
-Reduced pain ratings and opioid	2. Arthritis
consumption	
-Better patient satisfaction scores	
-Two small studies	
2. Chronic Low Back Pain	
3. Fibromyalgia	
4. Post-Herpetic Neuralgia	
5. Diabetic Neuropathy	

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Lidocaine 4-5% patches

• Clinical pearls:

May be cut

Need 12

hours off each

day

Capsaicin cream

• Clinical Pearl:

Wash hands after administration Diclofenac gel/patch

• Clinical Pearl:

~6% absorbed: systemic ADRs

4% available OTC

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

Topical Agents

Benefit	Little to No Benefit
Lidocaine:	Lidocaine
1. Chronic Lower Back Pain	1. Arthritis
2. Musculoskeletal Pain	Capsaicin:
3. Post-Herpetic Neuralgia	1. Musculoskeletal Pain
Capsaicin	Diclofenac:
1. Chronic Lower Back Pain	All Three:
2. Diabetic Neuropathy	1. Fibromyalgia
Diclofenac:	2. Pre/post-operative pain
1. Musculoskeletal Pain	
2. Arthritis	

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

NMDA Receptor Antagonists

- Mechanism for analgesia: glutamate at NMDA receptor leads to opioid tolerance, opioid induced hyperalgesia and central sensitization (increased neuropathic pain)
 - Antagonism at this receptor will decrease all of the above to relieve pain
- Typical dosing:

Ketamine	Memantine	Dextromethorphan	Magnesium
Preoperative: 0.2 to 0.4 mg/kg Chronic pain infusion: 10mcg/kg/min	Preoperative: 20-30 mg Chronic pain: 5-10 mg daily	Preoperative: 30-90 mg	Preoperative: 30-50 mg/kg

• Clinical pearls:

Ketamine	Memantine	Dextromethorphan	Magnesium
Emergence reactions	Hypertension	CNS effects	Cannot easily cross BBB
(psychiatric)	Dizziness	Abuse potential	

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

NMDA Receptor Antagonists

Benefit	Little to No Benefit	
1. Chronic, non-neuropathic pain	1. Musculoskeletal pain	
(Ketamine)	2. Fibromyalgia	
-Reduction in pain scores	3. Post-Herpetic Neuralgia	
-Decreased need for methadone	4. Arthritis	
2. Preoperative (Ketamine)		
-Decreased post-operative opioid	Magnesium (minimal studies)	
consumption	Dextromethorphan (minimal studies)	
-Reduction of pain scores		
3. Phantom Limb Pain (memantine)		

Pharmacy Today. December 2018. Pharmacytoday.org Curr Pain Headache Rep 2017;21(3):1-10. JAMA Surgery 2017;152(7):691-97.

- Cannabinoids
- Anticonvulsants
- Alpha 2 agonists
- Corticosteroids
- Muscle relaxants

Methods to Make Opioids Safer

Methods to Make Opioids Safer: Agent

Use immediate release formulations when starting Abuse deterrent formulations do not reduce the risk of dependence

Taper to the lowest effective dose Choose the least potent agent

MMWR Recomm Rep 2016;65(1):1-49.

Methods to Make Opioids Safer: Prescribing and Monitoring

Less than 3 days for acute pain

Frequent monitoring

Avoid benzodiazepine and opioid coprescribing

MMWR Recomm Rep 2016;65(1):1-49.

Inpatient St. Vincent and Ascension Initiatives

Non-pharmacologic interventions

- Pet Therapy
- Art Therapy
- Aromatherapy
- Physical Therapy
- Opioid orderset
 - Multimodal pain options available
 - Focus on PO pain meds (if appropriate)
 - Future state: primary way to order pain management medications in the hospital

- 1. If I shouldn't prescribe opioids, what can I use?
- 2. If I have to use opioids, then what can I do to minimize the risk?
- 3. What is St. Vincent and Ascension doing to help reduce opioid prescribing?

So, What Can I Do?

Strategies to Minimize Opioids
